

Gourmet Heat Lamps

By doping the quartz with the rare earth element neodymium, the yellow light is absorbed which has the effect of brightening reds and greens and increasing red-green contrast. It is perfectly safe for operating with food, and keeps the food warm and also enhances its appearance. Butchers have been using similar methods for years!

For operation simply replace clear bulbs in standard catering fittings.

Product Features	<ul style="list-style-type: none">○ Jacketed for extra protection○ Improves the appearance of food○ Easy lamp change○ Long life○ Inter changeable with existing lamps
Application	<ul style="list-style-type: none">○ Heated counters○ Food presentation
 Two Gourmet Heat Lamps are shown. The top image shows a lamp from a side-on perspective, highlighting its cylindrical shape and the white plastic mounting caps at both ends. The bottom image shows a lamp from a front-on perspective, revealing the internal quartz tube and the filament inside. The lamps are labeled '240V 300W'.
