Infrawrap - For Vinyl Wrapping

Infrawrap - For Vinyl Wrapping

Infrawrap is a purpose-built infrared heating solution designed specifically for professional vinyl wrapping environments. Using advanced IR technology, it delivers instant, controlled heat across a broader area than traditional heat guns — making vinyl more pliable, activating adhesives efficiently, and dramatically improving workflow. With its instant on/off functionality and consistent heat penetration, Infrawrap transforms the way wraps are applied and removed.

Vinyl wrapping requires precise heat to make the material pliable and properly activate the adhesive without damaging the film. Unlike heat guns that produce highly localised heat, Infrawrap distributes infrared warmth over a wider area, allowing installers to lift, warm and reapply vinyl smoothly and efficiently. The penetrating heat holds warmth within the material for longer, making manipulation easier and faster — even on thicker films. The result is improved control, reduced application time and a cleaner, more consistent finish.

Applications

- Paint drying and curing before wrapping
- Adhesive activation during vinyl installation
- Wrinkle removal (lift, warm and reapply)
- Post-heating and heat shrinking for secure bonding
- Vinyl and PPF removal assistance
- Heating thicker or speciality films

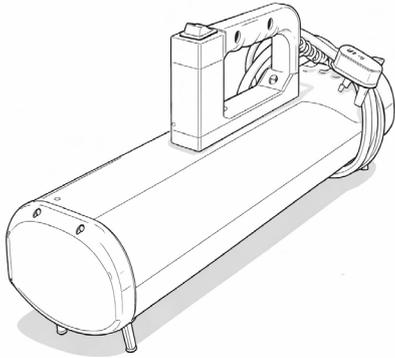

Efficiency and Workflow Advantages

Infrawrap is engineered to enhance modern automotive workflows. By reducing curing times and improving vinyl manipulation, it speeds up both application and removal processes. Its instant on/off control improves usability and safety during installation, giving technicians heat exactly when they need it and only when they need it. The result is faster turnaround, greater consistency and professional, showroom ready results on every vehicle.

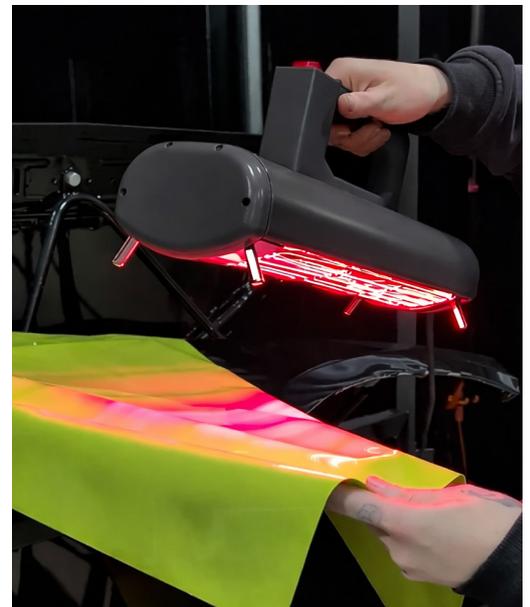

Product Specifications and Key Features

Designed for professional workshops, Infrawrap offers powerful infrared output options up to 2kW to suit different vinyl thicknesses. The system provides instant heat at the press of a button — no warm-up time and no waiting. A broader heat pattern allows faster coverage than a standard heat gun, while remaining quieter and more energy efficient in operation. Built for hands-on use, it delivers close-range precision and controlled heat exactly where it's needed.

Key Features

- Designed for professional workshops
- Infrared power output up to 2kW
- Suitable for different vinyl thicknesses
- Instant heat – no warm-up time
- Broader heat pattern than a standard heat gun
- Faster surface coverage
- Quieter and more energy efficient
- Close-range precision heating
- Controlled heat exactly where needed
